Job Description:

Detailed job description
Make a positive impact on the sustainable use of the world's natural resources by partnering with an industry leader. Together, we will change the company and push the sector in the

direction of a more environmentally friendly future.

You will have the support of our global network of coworkers and our inclusive culture at Metso. You are inspired to reach your full potential and will set out on a path of personal development with us. This is your call to go beyond the realm of possibility.

Deadline to apply: November 28, 2025

Greetings,

We are looking to add a reliability specialist to our team of service providers. A qualified NDT technician who appreciates travel, welcomes innovation, and is keen to contribute to state-of-the-art industrial maintenance solutions would be a perfect fit for this position. Using cutting-edge instruments, you will conduct sophisticated digital inspections to evaluate gears, mill shells, and other crucial parts on Metso's wide range of machinery.

You will answer to the Field Service Manager at Comminution in this role.

Although the primary location for this role is in Sudbury, Ontario, we are pleased to provide flexible work schedules, including hybrid possibilities. This position will demand 70% travel.

You are on a team.

You will work with a group of reliability engineers and NDT specialists committed to making sure our mining operations are safe and effective. We have a strong desire to preserve the integrity of our infrastructure and equipment by using cutting-edge nondestructive testing methods.

We collaborate closely with external stakeholders, such as equipment manufacturers and third-party inspection agencies, as well as internal stakeholders, such as operations teams, maintenance managers, and safety officials. Collaboration, ongoing development, and a dedication to safety are key components of our team culture. Our team members are spread throughout Kelowna, British Columbia, and Ontario.

What do you plan to do?

Conduct Non-Destructive Testing (NDT) Field Inspections: Complete NDT field inspections in accordance with client, industry, and corporate requirements.
Equipment Configuration and Adjustment: To guarantee accuracy and dependability, set up, calibrate, and run NDT equipment. Interpret and assess the findings.
Reporting and Documentation: Create thorough inspection reports and keep thorough records of every testing procedure.
Standards for Testing Use: To guarantee uniformity and quality, use testing criteria in line with relevant guidelines and protocols.
Cooperation: Work together with internal teams, customers, and contractors to provide excellent service and guarantee efficient communication.
Service Promotion and Issue Escalation: To guarantee customer pleasure and operational effectiveness, promote corporate services and escalate technical issues when needed.
Safety and Professionalism: Make sure that all field operations are safe and professional while following safety rules and best practices.

Who are you?

NDT field experience for at least five years.
CGSB Level 1 or 2 certification using at least one technique (phased array, MT, or UT).
A valid Class 5 driver's license, a spotless driving record, and the capacity to pass an alcohol and drug test are prerequisites.
Possession of a valid passport and readiness to go.
preferred expertise in industrial and mining domains (e.g., metallurgy, welding).
Knowledge of Metso products is beneficial.
exceptional technical proficiency in mechanical systems and NDT techniques.
Excellent verbal and writing communication abilities in French and English.
knowledgeable about the Microsoft Office Suite.
Extremely driven, well-organized, and capable of working independently under duress.
ability to operate in a variety of conditions (cold, heat, humidity).
the capacity to comprehend and use technical papers and field procedures.

What does it provide you?

Enabling sustainable contemporary existence is a motivating goal. The foundation of vital processes in the contemporary world is made up of minerals and metals. More sustainable methods of gathering and processing them are urgently needed, however. At Metso, you have the opportunity to contribute to changing the industry and bringing about constructive change.
Well-being and safety: Take advantage of mental health services, engagement surveys, healthy living incentives, occupational healthcare, and a substantial benefits package.
Reward and compensation: A worldwide incentive program linked to performance and corporate goals.
Opportunities for hybrid working: We support a flexible work environment even though we strongly believe in face-to-face meetings and collaboration.
A flourishing culture: We are dedicated to creating a welcoming environment where everyone may excel and realize their greatest potential. A brave, captivating, and compassionate culture that brings our people together to create a sustainable future.
Numerous learning options include ongoing growth discussions, internal mobility, mentorship programs, education support, large-scale initiatives, and international chances.
Global support: Make use of our peer network worldwide, which may provide invaluable help.
We work together to complete tasks by communicating honestly and openly.

The projected income range for jobs that may be performed in Ontario is between $96,200.00 and $111,100.00 CAD annually. Skills, experience, and certifications relevant to the position will determine actual remuneration within this range. Roles performed outside of Ontario will be compensated based on market circumstances and appropriate local legislation.

Joining Metso, Working at Metso, About Metso, Diversity and Inclusion, and Getting to Know Our People

As an equal opportunity employer, Metso is dedicated to creating a diverse and inclusive work environment. Job consideration will be given to all eligible candidates regardless of their race,

religion, color, nationality, gender, gender identity, sexual orientation, age, protected veteran status, or status as a qualified person with a handicap.

Metso leads the world in sustainable technology, complete solutions, and services for the metals refining, aggregates, and minerals processing sectors. With our knowledge of products and services, we help our clients become more productive, use less water and energy, and lower their environmental impact. For constructive transformation, we are your partner.

Finland's Espoo is home to Metso's headquarters. Metso employed about 17,000 people in 50 countries by the end of 2024, and its revenues came to around EUR 4.9 billion. The Nasdaq Helsinki has Metso listed.
